solution

- Ask 3 questions for all new prescription
- What did the doctor tell you about this medication?
- What is this has been prescribed for? She says to prevent UTI
- Did the doctor tell you how to take it.
- Confirm if any penicillin allergies
- Any prescription meds, any OTCs, any herbal natural products? She takes acetaminophen as needed, so can update in her profile. How do you do with that?
- Identified that she is breastfeeding.
- Confirmed with her if she had any UTI recently or used any antibiotics.
- Counseling:
- Cephalexin antibiotic for UTI prevention. Take every 6 hours, can take the last dose before bedtime. You may see improvement in 2 to 3 days
- Compatible with breastfeeding. Continue breastfeeding
- Monitor side effects can occur like diarrhea for child
- Non-pharms: increase fluid intake, avoid any spermicidal contraceptives
- Follow up: will call to see improvement in your condition
