Exam Case #5

CANDIDATE'S INSTRUCTIONS
A man approaches you with a concern and appears embarrassed. Please counsel and address any concerns as you would in practice.

Time Frame: You have 7 minutes to complete this station
Reference: CTMA (Parasitic Infections: Lice & Scabies)

TIPS
PharmacyPREP.COM

Standardized patient:

Opening statement: My child's scalp is very itchy even though she washes her hair every day. Can you recommend something for her?

Itchiness since 2 days.

If candidate asks: Did you see a doctor? → Answer: No, do I need to?

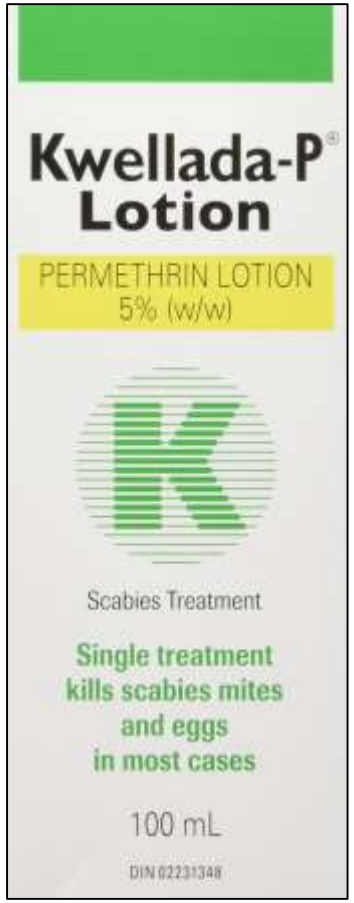
If candidate asks: Have you tried anything yet? → Answer: No

5-minute question:

- Can my child go to school tomorrow?
- I have a dog at home, I can't tell if it's infected, should I treat the dog too?

Patients' information:

- Mom: 32 years old, pregnant, no allergies, only on Materna (multivitamin) → symptomatic, has nits (tear-shaped) in hair, no live lice seen, some itchiness
- Child: 6 years old, female, 50 lbs, penicillin allergy (rash), no medications → symptomatic, has nits in hair, no live lice, very itchy scalp (scratching a lot, no pustules)
- Dad: 35 years old, no allergies, no medications → no symptoms/nits



On the table:

Nix (Permethrin 1%), Lindane, Resultz (isopropyl myristate cyclomethicone), Kwellada-P Lotion

SOLVED

- Treat whole family – mom and child are symptomatic, treat bedmates (dad) prophylactically.
- Assess medications, allergies and pregnancy status
- Patient education: assessing signs and symptoms, contacts (notify and assess), non pharms and pharms, emphasize second treatment, treating itchiness, don't scratch (secondary infection), monitoring (what to expect, when to see doctor)
  - Notify school and close contacts, can attend school next day
  - Dogs will not get human lice (different species). Pets do not spread human lice.
- Non pharms: avoid sharing and contact, dry clean or wash cloths and linens in hot water or keep in plastic bag for 2 weeks, vacuum furniture, soak combs/brushes in hot water 5-10 minutes, "bug busting" (30 min every 3 days for 2 weeks; can use vinegar
- **Pharms (OTC):**
  - Permethrin 1% (first line): use on damp, towel-dried hair, leave on 10 min, repeat in 7-10 days [*new guidelines: 3 treatments at 0, 7, 13-15 days due to resistance]. SE: itchiness, redness, swelling
  - Lindane: avoid in pregnancy and children <10 yo. SE: neurotoxicity
  - Isopropyl myristate cyclomethicone: use on dry hair, protect eyes, rinse with warm water in 10 min, repeat in 7-10 days. Avoid in <2yo, No info in pregnancy/lactation. SE: irritation, itchiness
  - Emphasis retreatment
  - Antihistamine or topical hydrocortisone 0.5% can be used for itchiness.
- Monitoring:
  - Live lice 24 hours after 2nd treatment, then speak to us. If itchiness persists >2 weeks after second treatment, then see doctor.
- Child can go to school next day after the first treatment.
- Reassurance/ empathy:
  - Head lice is not due to poor hygiene (only body lice); common condition.
